

# SERIES: PX078-500-S | DESCRIPTION: NON-ISOLATED DC SWITCHING REGULATOR

#### **FEATURES**

- economical open-frame design
- designed to meet EN/BS 62368
- no-load input current as low as 0.2 mA
- supports negative output
- output short circuit protection
- designed to meet EN IEC 62368-1 & BS EN IEC 62368-1

1. For input voltages higher than 30 Vdc, a 22  $\mu F$  / 50 V input capacitor is required. 2. Tested at nominal input, 20~100%, 20 MHz bandwidth.

At loads below 20%, the max ripple and noise will be 300 mVp-p max.
All specifications are measured at Ta=25°C, humidity < 75%, nominal input voltage, and rated output load unless otherwise specified.</li>

Note: 1. The required capacitors C1 and C2 (C3 and C4) must be connected as close as possible to the terminals of the module. 2. Refer to Table 1 for C1 and C2 (C3 and C4) capacitor values. For certain applications, increased values and/or tantalum or low ESR electrolytic capacitors may also

be used instead. 3. When using configurations as shown in Figure 3, we recommended to add an inductor (LDM) with a value of up to 10µH which helps reducing mutual interference.

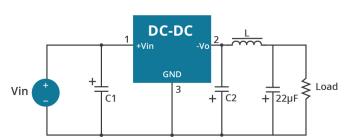

4. Converter cannot be used for hot swap and with output in parallel.

5. To further reduce the output ripple and noise, we suggested the use of a "LC" filter at the output terminals, with an inductor value (L) of 10µH-47µH.
