All 19" cassette style converters are equipped with either H11, H15, H15S4, or H15S2 male connectors. Mating female connectors are available as accessories. The four H-type connector versions are especially designed for power supply applications, capable of handling high operating currents.

The connectors have an integrated code key system allowing many coding possibilities. Converters with high output current normally use two contacts in parallel to keep the voltage drop across the connector low. In the case of very high currents, the connectors are fitted with round high current contacts.

**Note:** Parts ending with -G are RoHS-compliant for all 6 substances.
H11 Connectors

This connector has 11 contacts in one vertical column, marked 2 to 32. Mating and mounting conditions are according to IEC 60603-2 and DIN 41612. The connector contacts are hard-silver plated and correspond to quality class 1, allowing for 500 mating cycles.

**Note:** H11 connectors (male version) are used in the converter series (case size): H (H02), M (M02), and PSL (L04).

H15 Connectors

This connector has 15 contacts in two vertical columns, marked with 4 to 32 and is designed to meet DIN 41612. The connector contacts are hard-silver plated and correspond to quality class 1, allowing for 500 mating cycles.

Note: This connector type fits for the following converter series: Q, P, LPC, PSK, PSS, K, S, T, R.

Some models exhibit connectors equipped with 2 of 4 high-current contacts. See H15S4, H15S2 Connectors.

Cassette Style Mating Connectors

H15S4, H15S2 Connectors

These special connectors derive from the H15 connectors having standard contacts like the standard connectors, combined with 4 (H15S4) or 2 (H15S2) high-current contacts (jacks) according to DIN 41626. These jacks are designed to handle currents up to 40 A. They correspond to quality class 2, allowing for 400 mating cycles. The contact material is high-quality Phosphor Bronze.

The high-current jacks are joined separately to the connectors. To install them, carefully follow the assembly instructions. It is extremely important to solder cables, screw cable terminals or heat shrink sleeves to high-current jacks first, before inserting them into the moulding. Paralleled converters should preferably be interconnected on current bars or at a star point.

Using screw versions, the two outer high-current jacks may be inserted at a 90° angle in order to prevent possible short circuits between the cable terminals, especially in applications with high vibration environment. Heat shrink sleeves might be necessary for further isolation purposes or to keep clearances and creepage distances at specified levels.

An extraction tool allows removal of the high-current jacks for replacement (see fig. 16).

**Caution:** The use of an adequate cable strain relief device (e.g. Cable Hood etc.) is essential, in order to protect the high-current contact jacks from damage. Do not screw, solder or manipulate these contacts, when the connector is plugged into the male connector! The use of highly flexible cables is strongly recommended.

**Note:** H15S4 connectors (male version) are used in the following converter series (case size): K, PSK with line currents ≥20 A.

**Note:** H15S2 connectors (male version) are used in the following converter series (case size): P1000, K4000 with line currents ≥20 A. H15S2 connectors are not for new designs. Please consult the product data sheets for replacing models.

Extraction Tool for High Current Contacts

High current plugs and jacks can be disassembled from the molding by means of a special extraction tool (H15S2 and H15S4 connectors). Holding the extraction tool over the center of the connector’s female contact the outer part of the extraction tool should be fed between the molding and the outside of the female contact itself. This releases the spring clip fixing the contacts, in order to pull the contacts out of their molding for replacement. If the operation is performed correctly, very little force is required. Extreme care should be taken since incorrect procedure and excessive force could damage the tool and/or the connector.

This tool is available as an accessory for high-current solder and high-current screw contacts.

Note: In order to avoid damage, never manipulate high-current contacts when plugged-in!

Part number: HZZ00150-G
Description: Extraction tool

Fig. 15
HZZ00109 (STV-H15 S4-FLS/CO), Obsolete, 7 screw terminals (max torque 26.6 Ncm) and 4 solder jacks

#### Code Key System

An efficient coding system is of great importance in complex electronic systems. Since power supplies handle high currents and voltages, any false connection could be dangerous and quite costly.

This integrated polarizing system allows effortless coding by the simple insertion of coding wedges (HZZ00202-G) into the female connector moldings. The corresponding counter-parts, i.e. the coding tabs of the male molding, just have to be broken off to match the right female part. Major advantages are high mechanical stability and easy handling. The H11 connectors have 10 and the H15 connectors 8 coding positions. The use of coding wedges allows for many different coding possibilities. Coding wedges are available as accessories to female connectors; see fig. 17.

Accessories

Connector Retention Clips

The retention clip V is an accessory, which guarantees secure connection even under severe vibration, as for example in mobile applications. One connector retention system fits to almost all converters and all of the mentioned connector types.

The following converter series are delivered with pre-punched holes in the back plate for fast field-mounting of retention clips:

HZZ01229-G fits for Q, P, HP Series only in combination with HZZ01215-G (Mounting Plate Q).

Cassette Style Mating Connectors

Accessories

Cable Hood

A cable connector housing (cable hood) is available for all female H15, H15S2, and H15S4 type connectors with faston terminals (not suitable for screw terminals). It serves as a strain relief, isolates connections, and protects cables.

- **Part number:** HZZ00141-G
- **Description:** Cable hood for H15, H15S2, H15S4
- **Delivery content:** Connector housing, blank label

For K, S, R, T, FSK, PSS Series converters, the cable hood can be fixed to the converter case with a pair of U-shaped cable hood retention brackets; see fig. 21.

- **Retention brackets:** HZZ01218-G
- **Delivery content:** 2 brackets XMK187-G
  2 screws XM003-G (M2.5 x 6)
  Install. instruction BZM0006, blank label.

For fixing the cable hood with a pair of retention clips HZZ01209-G, a special version HZZ00142-G is available, where both sides of the cable hood are slightly modified in order to allow for insertion of the clips. The cable hood fixed with the clips has been tested to withstand vibrations as per IEC/EN 60068-2-6: 5 g, 7.5 h (2.5 h per axis). See fig. 22.

- **Part number:** HZZ00142-G
- **Description:** Cable hood for H15/H15S2/H15S4
- **Delivery content:** Connector housing, blank label
